

NaviSound 110 Single-beam Echosounder

RESON has introduced the NaviSound 110 Single-beam Echosounder, a compact, low-cost single frequency digital echosounder designed for a range of hydrographic and remote operating applications. The NaviSound 110 is reliable and easy to operate. Compact and lightweight, the system is designed as a unique, paperless “black box”™. The unit has a dedicated channel module that can be configured to operate with any commercial echosounder transducer and an affordable Side-Looking Sonar (SLS) option is also available. Delivered with a PC Windows terminal and control program, the NaviSound 110 data output is supported by all survey software packages. The control and display software graphically displays, records and plays back depth profiles on a PC.
