

# New Data Buoy from OSIL

OSIL have recently released the latest addition to their range of data buoys. The Rapid Deployment Buoy is for use in applications where data need to be obtained as soon as possible, and where other data collection systems are out of action for short periods of time.

This small, lightweight buoy is designed for up to four weeks of constant use, and carries a small solar panel with battery backup. Its size and weight make it ideal for one person to handle in the field, and its single point mooring makes for easy deployment and recovery.

The Rapid Deployment Buoy is a cheap, quick and easy way to ensure constant and immediate data collection when other systems are out of action, or where an environmental situation requires monitoring.

For more information about OSIL's extensive range of products and services, visit the OSIL website at [www.osil.co.uk](http://www.osil.co.uk).
