New Data Logger from TEI

Triton Elics International (TEI) announces that it has introduced the first of its new line of competitively priced data loggers - Isis-Lite. The easy-to-use, extensively field-tested core components of Isis Sonar form the basis of Isis-Lite, including servers to nearly every sidescan sonar on the market today. Add-on modules include advanced target capture and analysis, ASCII reporting, digitising, and mosaicking. The software is fully flexible for upgrading as new survey requirements arise, including multibeam, single beam, and sub-bottom profiler data.
The new TEI Isis-Lite boasts the stability of Isis Sonar; all of the QC displays of Isis Sonar; simple system set-up; competitive price; and full-featured upgrade path for all future TEI technology. Contact TEI for a competition matrix of Isis-Lite.
