New Feature Objects Database

HydroService AS has launched next-generation dKart Feature Objects Database software (dKart FODB 2.1) for use with the dKart Office ENC and Paper chart production system. dKart FODB is intended for centralised handling of scale-independent objects information: aids to navigation, traffic separation schemes, pipelines, etc.

The benefits of such an â€˜enhanced NavAids databaseâ€™ are that any scale-independent object (e.g. buoy) that belongs to several charts is created/edited only once - in the database. Applied up-dates/changes are distributed to affected charts in an automated way.
