New Features Coda GeoSurvey

CodaOctopus has announced additions and new pricing for its GeoSurvey product range. The Coda GeoSurvey Productivity Suite integrates the tasks of analysing, tagging and mosaicking complex datasets, ensuring faster and more precise results. Boasting sophisticated levels of functionality, the Coda acquisition systems range from the entry level DA50, for either seismic or sidescan acquisition, to the DA300 multi-channel three trigger system. All are capable of operating with the latest digital towfish from Klein, Edgetech and Benthos following the recent introduction of the all-new Windows network acquisition solution. Data can be viewed and processed on Windows XP or Windows 2000 as standard.
