

New Gardline Subsidiaries

Gardline Surveys, an Offshore Survey company based in Great Yarmouth, UK, has undergone a major organisational change, developing new subsidiaries to focus on particular market sectors. Organic growth over the years has helped Gardline to grow in stature and capability. However, so that it can better serve client needs, separate companies have been established. George Darling, the company founder, remains Group Chairman.

- Gardline Marine Sciences Limited will undertake head office duties
- Gardline Geosurvey Limited will concentrate on traditional marine geophysical and hydrographic surveys for oil and gas companies, submarine cable companies, scientific institutes and government authorities
- Gardline Geoscience Limited will provide geotechnical services including coring, cone penetrometer testing, seabed sampling and analysis for a diverse range of clients
- Gardline Environmental Limited will provide Oceanographic, Environmental and Coastal Hydrographic services, again to an ever-growing client base
