

New Map Showing Nordic Oil and Gas Activity

UK-headquartered Infield Systems has launched a new map showing current and future oil and gas fields and their associated infrastructure and activity in the Norwegian, Baltic and Barents Seas to 2017 at Offshore Northern Seas 2012. The map (1550mm x 1050mm) is reproduced in full colour, with onshore satellite imagery and licence block and concession areas listing current operator status.

The map highlights producing oil and gas fields with well locations along with operational, future and decommissioned platforms and pipelines.

This map is being officially launched with free distribution at the 2012 Offshore Northern Seas Conference and Exhibition in Stavanger from Infield Systems'

Stand J-1060.

Offshore Northern Seas is being held in Stavanger, Norway, from 28 to 31 August 2012.
