

# New Marine Info Station from Kongsberg

Kongsberg Maritime has developed a powerful and flexible PC based system designed to integrate several key shipboard functionalities, providing owners with a tool to drastically reduce costs. The Marine Info Station is primarily designed as a means to make better use of Voyage Data Recorder (VDR) and Simplified-Voyage Data Recorder (S-VDR) and to save time and money through the unique, DNV approved Remote Annual Survey.

VDR and S-VDR systems require a yearly survey in order to continue operating as required by international standards. This requires an authorised surveyor to visit the vessel and physically test the system onboard, which is an expensive and ongoing cost. The Marine Info Station can reduce costs by providing DNV approved Remote Annual Survey of VDR/S-VDR, using functions of the Kongsberg Maritime FleetMaster Electronic Log Book.
