

New MDL Web-site

Measurement Devices Ltd (MDL) a designer, manufacturer and supplier of laser-based products and positioning and navigation systems, is celebrating its twentieth anniversary with the launch of a new web-site. MDL was established in August 1983, originally to design and manufacture speciality positioning and navigation systems for the offshore oil-related industries. It has since focused development efforts on the Laser Optical field of 'Pulsed Time of Flight' laser range finding. Twenty years on, MDL products are supplied world-wide to the surveying, forestry, mining, ITS, industrial and traditional offshore markets. The Scottish laser Company decided to celebrate by re-vamping its web-site.
