

New MPM 1800 Buoy by Pharos Marine

Pharos Marine announces the launch of its new PMP1800 rotationally moulded polyethylene buoy adding to its comprehensive range of IALA compliant light buoys. This new Buoy is designed to provide a cost-effective and light weight buoy marker for a wide range of applications and conditions. The buoy can be used in fast current applications and has large reserve buoyancy allowing its use in deep waters where a long mooring chain is required.

Closed cell foam filling gives extra rigidity and also makes it virtually unsinkable. The buoy has four lifting eyes and up to four mooring eyes and all steelwork is stainless steel grade 316L, available for instant visual inspection and can be easily replaced.
