

New Office for Install

On 15 July 2013, Install srl opened the new operational office in Monte di Procida, Italy. This new and more spacious location measures over 200 square metres. The offices are in a spacious open-space area dedicated to processing, reception and recreation. There is meeting room and a warehouse area furnished as a laboratory for tests, checks and pre-mobilisation equipment and an area dedicated to the storage and to shipping/delivery of material/instruments.

In the last year Install's work experience has much increased and various projects concerning geophysical surveys and pipelines inspection have been carried out. The ability to successfully complete the various works is provided by a team of 20 technicians (surveyors, data processors, software developers, survey engineer). Install has recently

started the development of new technologies applied to the aerophotogrammetry industry using drones and 3d software , study of new GIS platform, dams inspections and LBL support. Install has also purchased a Visual Soft suite, Autochart application, and have invested heavily on equipment for positioning and geophysics.
