

New SeaBat 7128 Multibeam Forward-looking Sonar

RESON introduces the SeaBat 7128 – a new state-of-the-art Multibeam Forward Looking Sonar.

The SeaBat 7128 is a single and/or dual frequency (200/400 kHz) system and is available in depth ratings of 400m or 6000m. The system has been specifically designed for incorporation in a variety of platforms, from surface vessel, ROV or AUV.

The SeaBat 7128 focused ultra-narrow beams, high ping rate and high bandwidth combine to provide the user with superior resolution at effective long ranges, ideal for a great variety of offshore, military, harbor defense and scientific imaging applications.
