

New Survey Vessel Commissioned

Deep has commissioned her new survey vessel SV Storm. The vessel is a purpose-built 12m Blyth catamaran. To facilitate various survey sensors, the vessel is equipped with a hydraulic operated bracket through a moonpool between the hulls and an A frame.

The vessel will be used on survey contracts of Deep with the Dutch government and various windfarm-related

clients. Key survey equipment on the vessel are a SEA Swathplus echosounder, IXSEA Octans, L3 Klein 3000 side-scan sonar and an inshore sled operated Innovatum Smartrak cable tracker.
