

New Underwater Systems Company

Planet Ocean Ltd has been established to offer a range of underwater and marine meteorological instrumentation and monitoring systems. Terry Sloane, who until April was director and co-owner of Hydrosphere UK, heads the new organisation that will now handle agencies for ASL Environmental Sciences, McVan Instruments, Metocean Data Systems, and Richard Brancker Research. In addition to these agencies, a deal has been signed to represent Satlantic who specialise in optical Nitrate, Radiometers, Profilers, Irradiance, and Ocean Observatories. Planet Ocean will also provide system design and consulting services, specialising in remote monitoring, GPS tracking and telemetry solutions.
