

New Vessel in MMT's Fleet

As a natural next step in the process of expanded subsea services in the oil and gas industry, MMT has signed a long-term charter contract for M/V *Stril Explorer* that is operated by Simon MÅkster Shipping AS. *Stril Explorer* has one main ROV hangar, suitable for 2 x WROV, launching through hangar port/starboard side doors. The vessel is also equipped with a separate deck hangar suitable for 1 x IROV launching through a side door.

This makes *Stril Explorer* a suitable platform for conducting complex subsea operations demanding multiple ROVs in the water. These subsea services are performed in close cooperation with MMT's partner Reach Subsea AS.

MMT has conducted various survey assignments from this vessel during several projects in the past. M/V *Stril Explorer* is a DP2 offshore vessel with a large open deck and is very suitable for launch and recovery operation, for example with ROVs, AUV and geotechnical equipment. The vessel is equipped with a 60T offshore crane with a working depth of 1,500m.
