

# Norbit Echosounders for Jan De Nul

Seabed has secured orders from Jan De Nul Group, Belgium, for several tightly integrated all-in-one turnkey Norbit multibeam sonar systems. These compact survey systems allow for fast set-to-work on any sized survey platform while allowing for highest quality broadband FM data from a forgiving curved receiver array.

The systems each include a full inertial navigation system and surface sound speed probe. Only one cable from wet end to the small splash-proof topside is required. Total weight of the set is 25kg.
