

NORBIT Multibeam System for Emma Rentals

Peter Eriksen of NORBIT delivered a NORBIT iWBMS system for Emma Rentals during Oceanology International 2016. The iWBMS is the tightest-integrated high-end multibeam echosounder with built-in GNSS/INS. Several jobs have already been contracted by Emma Rentals, both for inland waterways and off the Baltic coast.

The [NORBIT iWBMS](#) system including the [Applanix Wavemaster 2 OEM GNSS/INS](#) will also serve as an important asset for Emma Technologies' research activities within the field of advanced backscatter processing. Emma Technologies, a manufacturer of ASVs/USVs, has chosen NORBIT as the most compact and user-friendly fully integrated MBES for mobile inspections on such vehicles. A complete ASV/ USV survey solution is available through Emma Rentals.
