

Ocean Infinity signs with US NMOC

Ocean Infinity has signed a Cooperative Research and Development Agreement with the US Naval Meteorology and Oceanography Command (NMOC), based at the Space Center in Stennis, USA. During the next five years, the collaboration will focus on combining and expanding technologies relating to a broad range of deep-water platforms and sensors focused on undersea data gathering and analysis.

Since its launch in July 2017, Ocean Infinity has developed the next generation of undersea data gathering techniques. Over the course of the last 12 months, the systems and processes used by Ocean Infinity have changed materially from the initial operational concepts and ideas. No one else in the world leverages underwater technology in the same way. Ocean Infinity's innovative, dynamic and cost-effective approach to undersea

data is of relevance to everyone who has a need or desire to better understand the ocean and seabed environment whether they be from the military, government or commercial sectors.
