

Oceanworks Welcomes Technical Director

OceanWorks International has welcomed back Harald Grob as technical director. Having spent almost half of his 30+ years of experience with OceanWorks, it's a befitting role that Grob takes on; leading the technical staff and providing innovative solutions to customers in all markets.

Prominent in Grob's background is his ability to develop innovative technical solutions and provide technical leadership from concept design through to successful construction and testing phases.

During his previous time with OceanWorks, Grob played a key role in the development of the US Navy Pressurized Rescue Module System (PRMS) as well as numerous other challenging subsea projects for OceanWorks' scientific, and oil & gas clients.
