

Open Registration for REMUS 100 Training Course

Registration is open for the REMUS 100 Operations & Training Course, to be held during the week of 15-19 September 2014. Based out of Hydroid's facility in Pocasset, MA, USA, this course will focus on basic vehicle operations and maintenance, with Hydroid's technicians walking participants through all aspects of the REMUS 100 system.

Hydroid's intensive 5-day course is designed for a variety of skill levels, from first-time AUV users to experienced operators looking for a refresher. Participants come away from the programme with all the skills necessary to effectively operate a REMUS 100 system. Hydroid also offers customised 2 to 10-day training sessions based on customers' unique training needs.

Hydroid's REMUS AUVs are modular and can be fitted with a wide range of different sensors. They have been used for hydrographic surveys, harbor security operations, debris field mapping, scientific missions and many basic and applied research programs funded by ONR, DARPA and the United Kingdom Ministry of Defense and others. Hydroid has built and deployed more than 290 vehicles, and its AUVs are trusted by more than 17 navies around the world.
