

Open-style Training Courses around The World

Teledyne RESON has announced a new training course programme called the Teledyne RESON Academy, including open-style training at global strategic locations and new training courses. The course offerings include industry-standard 2-day SeaBat training targeted at either surveyors or engineers, SeaBat AUV training, and PDS2000 multibeam or dredge software training. Beside these standard courses, bespoke trainings are available.

One of the anticipated courses is the comprehensive training course that covers the full hydrographic workflow from mobilisation, data acquisition to data processing and deliverables. This course is being offered with the customer's preferred hydrographic

software packages.

The [training courses](#) are available for all experience levels and are given in various languages or through interpreters.
