

OSIL's Dynamic Calibration Laboratory Well Used

OSIL are now responsible for the calibration of over one thousand instruments in their dynamic, high precision calibration laboratory. The regular calibration of monitoring instruments is required to ensure that the instrument is working within the manufacturer's specification and providing the highest quality data possible. Typical instruments that OSIL calibrate include Salinometers, CTDs and SVs and Multiparameter Sondes.

OSIL Director, Richard Williams, explains, "Our calibration lab and the services we offer to the industry and going from strength to strength. Our lab is fully ISO 9001:2000 accredited, which gives our customers a level of service that they can trust."
