# Perspective Product Line

Triton Imaging celebrates at Oi the milestone of 25 years of business, and are introducing a line of products under the Triton Perspective architecture.

This architecture capitalises on a wide array of advanced software technologies including: multi-core parallel processing, indexed cache files, workflow-oriented wizards, and multi-resolution image management to deliver ease of use, accuracy, quality, and versatility to the end-user. New Triton Perspective products include: Triton MosaicOne - sidescan and backscatter mosaicing package; Triton PerspectiveMap - map-based data fusion engine; Triton HarborSuitePD- underwater port security system; Triton SeaClass - sidescan image segmentation; Triton PipeTrack - pipeline tracking and free-span detection; and an emergent collection of tools for mine countermeasures, hydrography, habitat mapping, marine archaeology, and commercial survey markets.
