

Port Hedland Survey Completed

UTEC Survey Australia Pty. Ltd. (Perth) is completing a five-month bathymetric survey campaign for the Port Hedland Port Authority's channel and harbour capital dredging campaign. The hydrographic survey work, which is expected to be finalised by mid-July, is being carried out offshore Port Hedland in North West Australia using the dedicated 21-metre 'No Limit' survey vessel .

The "No Limit" is fitted with a high resolution Reson 8125 multibeam, navigation, acquisition, hydrographic personnel and full charting systems. The vessel also has towed side-scan sonar and reflection seismic capabilities.

The vessel will be available in late July to undertake hydrographic and geophysical work in northwest Australia.
