

Portuguese Hydrographical Institute Upgrades With iXSea Delph Seismic+ Plus

iXSea announced the signing of a contract with the Portuguese Hydrographical Institute for the supply of the latest release of the new Delph Seismic+ Plus imagery software suite.

The “Instituto Hidrográfico”™, based in Lisbon, has for a number of years been using Delph Seismic products for their research in the fields of oceanography and marine geology as well as for their Official Nautical Cartography.

The new Delph Seismic+ Plus imagery software suite will add value to geo interpretation and save on precious survey time by delivering in real time graphic 3D visualisation of the survey data.
