

PSS Provides Trencher Upgrade to Canyon Offshore

Perry Slingsby Systems (PSS) has entered into a trencher upgrade contract with Canyon Offshore. The modifications will include an upgrade to 600 horsepower, a new software controlled pipeline riding system, and a high-powered trench education system. The completed system will incorporate the latest in deepwater trenching technology from Perry Slingsby Systems. The Triton T600 system will be delivered in the first quarter of 2005 and will augment Canyon Offshore's fleet of high-powered trenching systems, including the Triton T750 Super Trencher, Triton T500 and Triton T200.
