

QPS Bundles Esri Technology

Quality Positioning Services (QPS, The Netherlands) has signed an original equipment manufacturer (OEM) agreement with Esri, USA, to bundle its QINSy and Fledermaus products with Esri software and provide a complete hydrographic survey, data management and charting solution.

QPS will incorporate two of Esri's ArcGIS applications into an end-to-end hydrographic package, QINSy Premium. One application is ArcGIS for Maritime: Bathymetry, which indexes, searches, and models bathymetric data. The other is ArcGIS for Maritime: Charting, which facilitates to capture, maintain, and manage nautical data in a centralised database. The package will also include QINSy hydrographic data acquisition and processing software as well as Fledermaus 3D visualisation and data analysis technology.

The QINSy Premium solution will provide hydrographers, marine scientists, planners, and engineers with a seamless integrated solution for robust marine survey data collection, efficient processing, and storage and distribution of data products.
