

# Quartet of BroadSeis-BroadSource Marine Contracts

CGG, France, has been awarded contracts for the 3D seismic acquisition of four major surveys using its BroadSeis with BroadSource marine broadband technology. Three of the surveys have been awarded in the Asia-Pacific region, with two offshore Malaysia and one offshore NW Australia, while the fourth is to be acquired offshore West Africa.

The four surveys represent a total contract value of over USD80 million.

Jean-Georges Malcor, CEO, CGG, said that CGG's BroadSeis-BroadSource technology delivers full-bandwidth broadband data. These recent awards clearly underline how critical true broadband data is becoming for reducing risk in frontier exploration and optimising field development.
