

RD Instruments and CODAR Ocean Sensors Enter Strategic Alliance

RD Instruments and CODAR Ocean Sensors announced that the two organisations have signed a memorandum of understanding establishing a new strategic alliance.

Both CODAR and RD Instruments possess highly innovative technology, which provides complimentary data for complex coastal applications. After years of working side-by-side on coastal applications, they now joined forces to address HF radar solutions for inland and offshore applications.

This alliance will allow both organizations to draw upon their extensive technology and experience to address these new markets.

RD Instruments manufactures acoustic Doppler current profiling (ADCP) and Doppler Velocity Log (DVL) products for a wide array of scientific, commercial and military applications.

CODAR Ocean Sensors is a supplier of high frequency radar solutions for current measurement and wave monitoring applications.
