

Recent Orders for NETmc Marine

NETmc Marine announces two yearend orders for their range of digital video recorders. Rovtech Limited have placed an order and taken receipt of their first DVR Inspector for use with their Panthers, Tigers and Lynx ROV fleet.

The unit Rovtech have bought includes all the new options from NETmc Marine:

- Black Box operation
- allows a separate video file to be stored on another hard drive, which overwrites itself after a certain time, ideal for HSE requirements.
- built-in video overlay; this is configured to accept a range of industry standard formats including Taylor-Lann, Coabis and SCOPE. The Rovtech unit is configured with two serial inputs
- audio level indicator LEDs on the front panel; this gives a visual indicator that the recorder has an audio input.

The second order was from Diving Contractor Osiris Marine Services for a DVR Peli. Osiris Marine are involved in many types of diving operations from coastal inspection to tunnel surveys, and after a recent purchase of a small ROV Aiden West, owner of the company, wanted to find a DVR that would compliment this purchase and that could cope with this type of work, working in non dry environments. Again other products had been considered however the all in one DVR Peli, with its built-in display and full functionality, was deemed to be the best solution.

The DVR Peli will also be delivered with video overlay and the Black Box option, thus removing the requirement for a second recorder for HSE purposes.
