

# Remote Display Software for Easytrak

Software enhancements to Applied Acoustics' Easytrak subsea tracking system are launched during UI 2008 in New Orleans. The package complements the software already in the main console by providing an additional display on an external PC via Ethernet.

The intuitive software allows the user to resize or rescale the vessel graphic, utilise a measurement tool and customise the workspace. The USBL tracking system, Easytrak, is manufactured in the UK by Applied Acoustic Engineering and sold in the US by Subsea Technologies of Houston.
