

Repeat Order Success for AMLâ€™s SV Plus

OSIL has just received an order from Gardline for AMLâ€™s newly upgraded SV Plus sound velocimeter and a real-time data communications package for use at 5000m depth. As an existing customer of AML, this confirms the quality and performance of AMLâ€™s sound velocity products.

The new SV Plus includes an upgraded sensor made from hi-tech composite material.

It also offers a larger onboard memory at 64 Mb, with a unique USB port for high-speed data download to PC. The system is already well proven in the field, particularly in activities such as commercial echo sounding and swathe bathymetry. The SV Plus provides a field accuracy of 0.05 m/s and a precision level of 0.03 m/s.
