

ROV for Deepwater Wreck Salvage

Blue Water Recoveries has awarded Perry Slingsby Systems (PSS) the contract to supply a Triton XLX 35 ROV for their latest deepwater salvage project. The 4,000 metre rated system includes the latest in tooling and survey interfaces, including High Definition video for improved performance. It also features the all new ICE (Integrated Controls Engine) real time control system with state-of-the-art Gb telemetry and graphical diagnostics.

Blue Water is a world-leading ultra-deep-sea operations company that specialises in the research, location and filming of modern and historic shipwrecks. The TXLX will be employed on various deepwater recovery projects with a focus on cargo retrieval following its delivering November 2008.
