

Royal Navy Confirms Repeats Order of Valeport Products

Valeport announces that the Royal Navy has again chosen Valeport Model 740 portable tide gauges for use in its survey programme. Similar products ordered two years ago have proved so effective in application that a substantial new order has been placed by the Navy and supplemented by an additional order for Valeport miniSVS sound velocity sensors.

As an addition to the standard specification, the 740s were supplied with a telemetry link so that the Navy could receive measurements in real-time.

The miniSVS sound velocity sensors also supplied, use state of the art digital 'time of flight' acoustic technology to provide the lowest noise, highest accuracy, best resolution sound velocity data available in the world. With a miniature size and a choice of sensor lengths from 100mm to just 25mm, the miniSVSs will be used in a variety of projects in combination with the Navy's multibeam echo sounders.
