

RS Aqua Sign With D&A Instrument Co

RS Aqua Ltd have signed a representation agreement with D&A Instrument Co, designers of the OBS range of Turbidity and Suspended Sediment sensors. The agreement covers the UK and Ireland and comes at a time when D&A have just completed a move to a larger fabrication facility and are launching their new OBS-3+ Turbidity Sensor. This device features a micro-sized probe that responds almost linearly over a 1000 fold change in sediment concentration and turbidity.
