

Satlantic Expertise for University

Satlantic Incorporated is to provide expertise in marine monitoring for Memorial University's Bonne Bay Ocean Observatory Programme. This system utilises innovative video and acoustic technologies and a suite of sophisticated in situ sensors to continuously sample physical, chemical, and biological properties of the water. Information from the system will be used to study the effects of climate change on the marine ecosystem. The system is currently installed and operating in the Towing Tank at the NRC Institute for Ocean Technology in St. John's prior to deployment off the west coast of Newfoundland.
