

Scanning Sonar Delivered to Tetis Group

EofE Ultrasonics, Korea, reports it has delivered ten sets of scanning sonar [Echollogger MRS900](#) to Tetis Group. The 2000m-rated ultra-compact scanning sonar will be installed on Tetis' ROVs. EofE Ultrasonics said it demonstrates that performance and compactness of the device are outstanding and ideally suitable for navigation and search operation of the vehicles.

MRS900 is optimally design for underwater vehicles with high scanning speed and high resolution images. EofE Ultrasonics believe more underwater vehicles will adopt the high resolution scanning sonar RS900 as well as MRS900 for performance especially when related to the prices.
