

Seatronics Invests in Sonar Equipment

Seatronics Ltd, UK, has invested more than USD1.5 million in advanced sonar imaging systems and associated equipment from EdgeTech. The purchase is part of a multi-million dollar investment by Seatronics which will expand the marine equipment rental fleet.

The company selected EdgeTech to provide the most underwater survey equipment to meet customer needs. Notable equipment purchased by Seatronics included the following EdgeTech systems: 4125 Shallow Water Side Scan Sonars; 4200 Multi-Purpose Survey Systems; 3200 Sub-bottom Profilers; 2000 Series Combined Side Scan Sonar/Sub-bottom Profilers; ROV-based Sonar Systems and 4600 Bathymetry/Side Scan Sonar Systems.

Seatronics' UAE regional manager Jeff Holtom said that by building on the success of Ocean Business and forging stronger links with key suppliers, Seatronics has obtained non-exclusive sales representation for EdgeTech products in the Middle East region.
