# SevenCs Launches ORCA Master G2

SevenCs has launched a new version of its ECS product series. ORCA Master G2 has been optimised for touchscreen usability, but still supports traditional input methods with keyboard and trackball. The software was developed to meet the latest standards for ECDIS type approval, so all features required for safe and comfortable navigation at a professional level are included.

Developed by professional navigators for professional navigators, ORCA Master G2 is as easy and intuitive as possible and at the same time provides a high level of automation, reducing user interaction to the minimum.

Loading Charts Without Leaving Navigation

Loading charts and permits appears to be a difficult and time-consuming exercise with most navigation systems. With ORCA Master G2 loading and updating charts just takes a single tap without having to shut down the navigation mode.

This product can be provided as software only, or in a package together with IEC conform hardware and type approval for OEM customers.

ORCA Master is according to SevenCs one of the most commonly used ECS. It is utilised by professional navigators, workboats and hydrographic offices worldwide.

More information and instructions are in the SevenCs ORCA Master G2 Youtube channel.
