

# Side-scan Sonar Systems for Seatronics

The UK-based rental group Seatronics has purchased a full suite of underwater sonar survey equipment. As a supplier of electronic subsea equipment to the hydrographic, environmental, geophysical, metocean, ROV and diving industries this investment of USD434,000 with EdgeTech compliments Seatronics' rental pool with the latest in technology.

The recent investment consists of two EdgeTech 4125 Side Scan Sonar , two EdgeTech 4200 Side Scan Sonar and two EdgeTech 2000-DSS Tow/ROV Side-scan & Sub-bottom profiling systems.

When asked about the investment with EdgeTech, Managing Director of Seatronics David Currie says: that the decision to order these EdgeTech sonar systems was in line with the aim to provide the very latest in technology from the world's leading manufacturers . "With this substantial investment Seatronics is now even better prepared to help our customers with all of their underwater survey challenges."
