

SITECH Gulf to Represent Teledyne Marine in the Middle East

Teledyne Marine has contracted with SITECH Gulf to serve as their exclusive distributor in the U.A.E., Oman, Qatar, Bahrain, Kuwait, Saudi Arabia, Jordan and Egypt, and their official distributor in select North African countries to represent their full line of marine products for civil engineering, offshore energy and oceanographic applications.

This agreement represents the first time that Teledyne Marine has appointed a single entity to represent their full spectrum of marine products spanning their instruments, imaging, vehicles and interconnect technology verticals.

Mike Read, president, [Teledyne Marine](#), commented: "This agreement illustrates Teledyne Marine's commitment to expanding our presence in this region and to advancing our

leading-edge marine technology solutions across multiple markets."

Ted Germann, Teledyne Marine's vice president of emerging markets added: "Teledyne Marine enables SITECH Gulf to significantly expand their marine portfolio. As existing dealers for Trimble Marine Construction Software (TMC) and Trimble controls, the addition of Teledyne Marine will allow SITECH to now offer their customers and partners in the Middle East and North Africa complete underwater packages, delivering 'Eyes Above and Below the Water' with real-time Teledyne sonar verification."

John Taylor, COO of [SITECH Gulf](#) stated: "We are extremely excited to have been chosen as the dealer of Teledyne Marine products in the Middle East and North Africa markets. The combination of Teledyne plus Trimble makes SITECH Gulf a one-stop shop for technology unrivalled in the MEA region, and even worldwide, for the land and now marine. Building on our success in promoting technology on land and marine construction projects, this new cooperation with Teledyne is a perfect fit to expand that success to further offshore and to under the sea."
