# Software Update for Navigation Sonar

FarSounder makes available SonaSoft version 3.2, a major upgrade to the software which powers the FarSounder-500, FarSounder-1000, and FS-3DT sonar. This upgrade includes processing, user interface, and display improvements.

Major upgrade features include:

True Target Motion
Chart Viewer Improvements
Sonar Status Indicator
Improved Colour Scale Display

Videos and screenshots of the new software are available on the company's website.

The software update is compatible with FarSounder's existing products and integrates directly with select ECDIS and integrated bridge systems including the Wärtsilä SAM Electronics NACOS Platinum and Transas Navisailor 4000. The upgrade is available to all current and new FarSounder navigation sonar customers.
