

Stats Purchase AC-ROV

Specialist engineering group Stats have initially purchased one AC-ROV underwater inspection system for use on their various pipeline integrity projects. The company were actively searching for a genuinely work capable micro submersible. Sighting the systems size (critical to Stats applications), versatility, manoeuvrability, and durability, the AC-ROV is for Stats a genuine micro 'work class' ROV that allows serious inspections of confined underwater areas. A convenient detail was found in the fact that the AC-ROV is manufactured in Aberdeen, Scotland, just a few miles from Stat's HQ.
