

STR Signs Agreement with IKM Technique

Subsea Technology and Rentals has announced a new partnership with Norwegian subsea tooling experts IKM Technique. This agreement will enable STR to further provide complete technology solutions by offering an extensive range of industry leading ROV tooling, service and support from its UK base and regional agents.

Jostein Reinsnos, general manager at IKM Technique said this agreement with STR will enable both companies to serve a larger area of the subsea market with proven solutions. IKM Technique sees this as a start of something bigger that will support and provide the industry with easy access to their subsea and ROV solutions.

Neil Jackson, sales and operations manager at STR, commented on expanding their ROV tooling supply and the benefits customers can expect. Building on their growing reputation for delivering the very best survey and subsea equipment solutions, this new range of ROV tooling at their disposal is vast, serving only to strengthen their presence within the rental market and facilitate the company's ability to support tailored solutions for all the customers worldwide.
