

Sub-Atlantic ROVs for Noordhoek

Sub-Atlantic will supply two Mohican ROV systems to Noordhoek Offshore. The agreement, worth GBP1,250,000 will see Sub-Atlantic deliver the ultra-high thrust inspection ROVs which are specifically designed for working for extended durations in high current and tidal locations, before the end of the second quarter of this year.

Noordhoek operates internationally though primarily in the North Sea and Irish Sea. Alasdair Murrie, sales and marketing manager with Sub-Atlantic, said the Mohican is a platform for a plethora of tasks and sea conditions as the concept for this ROV was high power to weight ratio for operations in fast changing current situations such as those often encountered by Noordhoek in their North Sea operations.

These new ROVs are complementary to the existing Noordhoek fleet and will provide the company with market-leading assets to further develop their presence in the market, added Noordhoek managing director Leen Noordhoek.
