

Support for UXO Seminar

Bibby HydroMap is one of the sponsors of the upcoming UXO Survey Seminar organised and hosted by The Hydrographic Society UK. Taking place at Southampton Solent University Conference Centre on 19 June 2015, the event will attract participants from a range of industry sectors including offshore oil & gas, marine renewables, port and terminal civil engineering and dredging.

Unexploded ordnance (UXO) poses a potential risk to seabed developers and contractors and the survey and detection of such explosive munitions presents various challenges. Bibby HydroMap has decades of experience in the provision of [large-scale UXO surveys](#), much of which is a result of the growth in the UK offshore wind industry. The company has worked closely with clients and UXO consultants to optimise its UXO survey configuration

to maximise data quality whilst increasing efficiency.

Marketing manager Heather Carrigher comments that Bibby HydroMap, which also will be exhibiting during the event, is seeing a significant increase in clients' UXO survey requirements. She describes the event as an ideal forum to discuss industry best practice and future survey strategies.
