

# Swathe Services to Represent CEE HydroSystems

Hydrographic survey singlebeam echosounder manufacturer CEE HydroSystems, with offices in Sydney, Australia, and San Diego, USA, has entered into a new 2016 distributor agreement with UK-based Swathe Services. Swathe Services is to represent CEE HydroSystems in the UK and Ireland.

CEE HydroSystems manufactures compact portable echosounders and all-in-one echosounder and GNSS systems for shallow water surveying, including the [CEESCOPE](#) RTK GNSS hydrographic survey system.

This appointment is the latest in a series of new agency agreements with the goal of further promoting the new CEE echosounder systems for marine and freshwater survey

environments.

James Williams, managing director of Swathe Services, said he is looking forward to the partnership with CEE HydroSystems. The company has a strong quality focus, high integrity, with an emphasis on driving its technology forward and continuing to add value with new features and capabilities. According to him, this approach makes CEE Hydrosystems stand out in the crowded singlebeam echosounder market.
