

Teledyne Marine in Full Force at OI London 2020

Teledyne Marine will once again be out in full force at OI London 2020. With 23 brands and over 400 products, Teledyne truly delivers something for everyone, the company says. To help customers navigate the many solutions, the company has dedicated one booth to its Discovery Zone, which will detail how and where products are being used alone and in combination to solve the difficult challenges customers face in the company's key markets, including oceanographic, energy, infrastructure & civil engineering, defence & security, and marine life.

The second booth will serve as Teledyne's Collaboration Zone, with ample meeting space for customers to relax, collaborate and brainstorm in a comfortable and engaging setting with Teledyne's 50+ OneTeam members throughout the conference.

Daily Dockside and On-water Demos

"We also invite you to experience our products first-hand in a series of dockside and on-water demonstrations. Our daily dockside demos will showcase our SeaBotix ROV equipped with Benthos' brand new Ultra Compact Transponder (UCT) and new ruggedized BlueView M-series MK2", the company says in a press release.

"Our on-water demos will highlight the full suite of our technologies, including our ultra-high-resolution mid-water RESON SeaBat T50-R Extended Range with a built-in INS multibeam echo sounder, Odom's new compact single beam echo sounder, RD Instrument's TASMAN DVL and Teledyne's TSS Saturn high accuracy fibre optic INS, Optech's TLS-M3 high-resolution laser scanner, PDS and CARIS on-board software, and Benthos' new GNSS Survey Feature for easy recovery of acoustic release deployments."
