

# Teledyne RDI â€™ ADCPs in Action'

Teledyne RD Instruments (RDI) will host its 6th ADCPs in Action User's Conference in San Diego, CA from 5th to 7th November 2007. Teledyne RDI's â€™07 event will be comprised of three simultaneous tracks including: water resources flow measurement applications; coastal/oceanographic waves/current profiling applications; and precision navigation applications.

This year's event will include a well rounded group of presentations and panel sessions provided by customers and industry experts, extensive product/software training, user forums, data analysis clinics, FAQ sessions, round-table discussions, new product introductions, poster papers, and innovative third party solutions. This three-day conference also includes numerous social events designed to encourage networking and

a free flowing exchange of ideas and information.

Teledyne RDI's first ADCPs in Action Users Conference began back in 2000 as a way to bring the oceanographic community together for a lively exchange of information between Acoustic Doppler Current Profiler (ADCP) and Doppler Velocity Log (DVL) users, industry experts, and third party manufacturers. ADCPs in Action continues to grow in popularity, attracting industry experts from around the globe who share their experience and address the topics deemed most important to today's ADCP/DVL users.

At this time, we are formally seeking ADCPs in Action 2007 speakers, co-sponsors, poster paper presenters, and attendees.
