

# Teledyne RDI Express ADCP

The Express ADCP configuration that Teledyne RDI has introduced is a cost-effective alternative to the more extensive Workhorse product. This product is aimed for users with a limited budget and for those who do not require the advanced setups of the Workhorse.

The Express ADCP is a solution for moored current profiling applications. The most common features are pre-programmed and the configuration can be adapted using the Windows software. The Express ADCP configuration is compatible with Workhorse accessories and the configuration can easily be upgraded to the Workhorse product line.
